Dairy-Herd-Improvement-Association Letter ARS-52-45
(Vol. 32, No. 12)

December 1956

**NATIONAL ORGANIZATIONS COOPERATING
IN WEIGH-A-DAY-A-MONTH DAIRY RECORDKEEPING PLAN**

Many national farm and trade organizations interested in the agricultural problems of the nation and the financial position of the farmers are cooperating in the promotion of the **WEIGH-A-DAY-A-MONTH RECORDKEEPING PLAN** among dairymen who are not now enrolled in some recordkeeping plan. They recognize this new plan as a means of getting many additional farmers who are not now participating in an organized plan of testing to keep production records on their cows. There is general recognition that the individual dairyman can do little in regard to the price he receives for the milk he produces, but he can do much to make his dairy operation more efficient and profitable and increase his net returns by lowering his cost of milk production. Production records on individual cows and herd feed cost records provide the best means for lowering milk production costs. With such records, the dairyman can (1) cull the low-producing, unprofitable cows, (2) feed the remaining cows efficiently according to their individual production and (3) select his best cows from which to raise his herd replacements.

To date, the following national organizations are calling the Weigh-a-Day-a-Month Dairy Recordkeeping Plan to the attention of their members, cooperators, customers, etc.: American Farm Bureau Federation, National Milk Producers Federation, National Grange, National Farmers' Union, National Council of Farmer Cooperatives, National Association of Artificial Breeders, American Feed Manufacturers Association, Farm Equipment Institute, U. S. Office of Education (Vocational Agriculture), Farm Credit Administration, Farmers' Home Administration, and American Bankers' Association.

DHIA PROVED-SIRE RECORDS TABULATED IN NOVEMBER 1956

Following is a list of 312 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in November 1956. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
